Customer Churning: Executive Summary Template

Price Sensitivity is not a main driver:

- Customers are not overly price sensitive, conduct more customer outreach to dermine best retention strategies
- Prioritize incentives to keep customers around for longer

Churn is at ~10%:

- Net margin & customers' electricity consumption over the past 12 months are the main contributors to churn
- Magin on power subscription and time are also influential factors

Churning scenario:

- PowerCo, a major gas/electricity utilities company, notices that their customers have been churning
- Worried about customers leaving for other energy providers & have asked BCG-X to help investigate the cause of churning
- Data analysis was conducted to investigate impact of price on churn

Our hypothesis:

- Customers' sensitivity to price is the main reason why they're churning at PowerCo.
